## MFB-31-CitroTech® is a Green Technology, and it is a Fire Chemistry Breakthrough for the Entire World

MFB-31-CitroTech® Chemistry is made from 100% natural materials, and we use a safe, food-grade cling substance that does not harm our eco-systems nor our aquatic environments. The bio chemical used to create our clear proactive fire defense coating is also used on medicines as defensive, enteric coatings. This coating protects our fire inhibitor chemistry after it has been sprayed on dry vegetation. For example, humidity and fog does not easily degrade its ability to interrupt the ability of fire to ignite, spread and survive.

Our MFB-31 Citrotech® fire inhibitor is meant to be applied before fire arrives, and not so much as a fire extinguisher. We make the claim that if the proper equipment and amount of our chemistry is applied to what fire needs to advance upon to survive, it will stop the ability of fire to advance. This approach fights fire more safely, before it arrives, and with much less water.

Our potassium-rich, odorless, citric dry constituents are very hygroscopic. This allows our formula to absorb our aqueous delivery agent, which is water, without any fall-out of the constituents.

Our finished goods chemistry never needs to be re-blended after it has been created. This supports large tanks in our Wildfire Defense Systems, so they are ready when needed to defend your property.

Our formulation was created to be applied in an atomized manner, such as from a backpack cannon sprayer. Applying our chemistry in this manner makes it cost effective, and it also conserves water.

In the future you, will see Mighty Fire Breaker® fire extinguisher products which will have a number of uses, including extinguishing lithium battery fires. These extinguishing products will be composed of similar constituents, but with different loading.

Mighty Fire Breaker®, Creates Environmentally Clean, Fire Inhibitor Products at Quality-Controlled Facilities which are Audited by the EPA Safer Choice and UL GreenGuard Gold.
